

Company 1:

- **Industry:** Retail (Walmart)
- **Technology Integration:** AI driven supply chains, blockchain for food safety tracking, they use a self healing inventory which was a product from Microsoft for cloud and IoT solutions.
- **Advancements in Operations:** Their automation system manages warehouses before their staff even starts their shift, calculating the best delivery routes and managing restocking automatically. Walmart has introduced a major use of robotics to obtain fulfillment needs.
- **Profit Impact:** The inventory system that Walmart bought from Microsoft alone has saved Walmart \$55 million. Their digital transformation has also generated \$120.8 billion in the year 2021.
- **Organizational Improvement:** Due to the integration of AI tools, what would take an analyst hours of data to syphon through and keep track of, an employee just has to ask AI what items are short in stores and it answers the question with data in seconds. Eliminating the need for manual tracking.
- **Overall Benefit:** From once a brick and mortar company to a technology focused enterprise they lead the industry in retail sales on a global scale. Their adaption to technology allowed them to improve scalability rapidly.

Company 2:

- **Industry:** Food (Mcdonald's)
- **Technology Integration:** Through the invention of their mobile app, self order kiosks, and dynamic yield they became a leader in their export of personalization and logic on decision making. With also utilizing geofencing technology for their ready upon arrival service.
- **Advancements in Operations:** Drive Thru Menus that adapt to weather and traffic changes, with smart IoT and edge commuting, allowing managers to predict failures.
- **Profit Impact:** With order recommendations at the POS system such as meal upgrades and side suggestions, studies have shown that their premium members visit three times more often than non members with their integrated reward system.
- **Organizational Improvement:** With their geofencing they were able to streamline the workflow for crew members and improve working experience as well as customer experience.
- **Overall Benefit:** By centering their technological advancements around customer experience, Mcdonald's has increased speed and customer loyalty. With their advancements improving organization, workload, and uptime for stores.

Company 3:

- **Industry:** Music (Gibson Guitars)
- **Technology Integration:** Gibson implemented Microsoft Dynamics 365 to replace the manual processes of multiple duties and services and replaced the manual process with a cloud based ERP system. For manufacturing Gibson partnered with EOSYS to deploy a real time tracking system of each guitar that goes through the production line.
- **Advancements in Operations:** Shifting from doing everything manually and ticket based systems to a fully rendered SOP system has provided Gibson visibility in production and

overall enterprise, also their integration of Microsoft Teams has opened collaboration and communication issues.

- **Profit Impact:** Due to their digital shift, Gibson saw a 324% increase in their year to year revenue growth for direct to consumer interactions. Receiving an upgraded B credit rating for a better than expected cash flow.
- **Organizational Improvement:** They have a program where they have a share of success that creates value driven percentage profits directly to their employees. Improving morale and empowering employees through a digital shift.
- **Overall Benefit:** With Gibson's new ERP and production system, they have completely transformed workflow for their operations with data driven improvements. While still maintaining craftsmanship while keeping up with the music instrument industry.
