Disease Epidemic - Python
The curious case of the glowing nose
Gavin
Instructions
A name for the cat!
Run
Terminal
Reset
Save
Mark
Problem
Now you know how to read in text from the user, it's time to write a program to read in suggested names and print them out!
Your program should work like this. The black word(s) are what the user will input, as in the example on the last slide.
Name: Tilly
Meow Tilly
Here is another example, with another suggested name:
Name: Mrs Socks
Meow Mrs Socks
program.py
name = input("Name: ")
print("Meow", name)
Submissions
Output
Name: Tilly
Meow Tilly

Disease Epidemic - Python
The curious case of the glowing nose
Gavin
Instructions
Rate of "Green Glow" Spread
Run
Terminal
Reset
Save
Mark
Problem
You have been told that each hour, the number of cats infected with the disease you've nicknamed 'the green glows' doubles. Write a program that reads in how many cats are infected now, and prints out how many cats will be infected in an hour.
Your program should work like this:
Cats infected: 10
Cats infected in an hour: 20
Here is another example:
Cats infected: 2
Cats infected in an hour: 4
Hint
Remember the sign for multiplication in Python: *
height = 4
width = 10
area = height * width
print("The area of this rectangle is", area)
program.py
num = int(input("Cats infected: "))
next_hour = num * 2
print("Cats infected in an hour:", next_hour)
Submissions
Output
Cats infected: 10
Cats infected in an hour: 20

Disease Epidemic - Python
The curious case of the glowing nose
Gavin
Instructions
How many tablets for each cat?
Run
Terminal
Reset
Save
Mark
Problem
Each cat should be given tablets based on how much their nose is glowing. If the nose is producing:
0 lumens: No tablets
1 or 2 lumens: 1 tablet
More than 2 lumens: 2 tablets
Write a program that prints out how many tablets to give to each cat. Your program should work like this:
Luminosity: 0
No tablets
Here is another example:
Luminosity: 2
1 tablet
Here is a third example:
Luminosity: 15
2 tablets
program.py
lumens = int(input("Luminosity: "))
if lumens == 0:
print("No tablets")
elif lumens <= 2:
print("1 tablet")
else:
print("2 tablets")
Submissions
Output
Luminosity: 0
No tablets
